

# IRRILAND BOOMS

Foldable boom

Manual for use of Raptor

#### **Raptor series:**

Strong, easy to fold, turnable and available in different models from 18/26 to 44/52 mts

Raptor boom in transport position – back view

### Raptor boom in transport position – lateral view

### Raptor boom in transport position: lateral/back view

Fully open Raptor boom

# Raptor boom: nozzles with ball valves

### Raptor boom: strong threeangle frame

# Raptor boom: very strong with galvanized square pipes !

### Raptor boom: folded arm and Lock catch (for 2nd section)

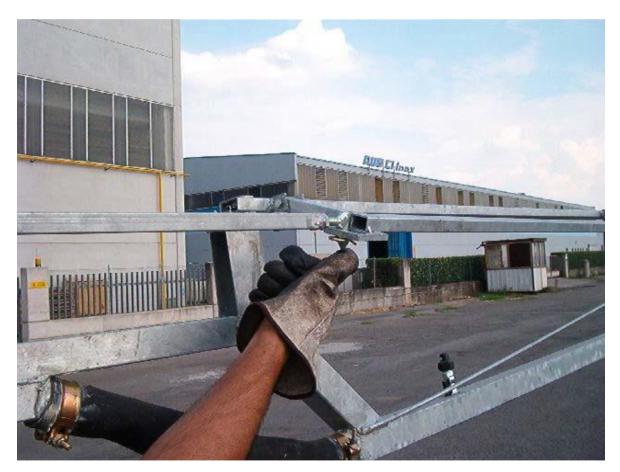

## One person is enough to fold up any of the Raptor boom series !

- Adjust the lifting system of the machine as long as possible to avoid too much inclination of the boom when it arrives against the machine
- Remember to grease all the joints and the holes for the pins on every section
- Always open and fold the sections alternatively one each wing/side
- Turn every second nozzle to the field and the others to the machine to improve the soil drainage

Every section is secured by an R clip. Take it off, than go the opposite side of the section, lift it up and fold it.

Last section

## Fold it onto the bigger section and secure it with the lock catch.

Last section in folded position

#### Always hold the sections high when folding and opening the boom

Third section

## Fix the third section onto the second with the lock catch

Third section onto the second one

#### Remove the central reinforcement bar from the second and first section before you fold that section

Reinforcement bar (in the middle of first and second section)

## Follow the same process to fold second section into the first.

Folding the second section

#### Pay attention to the first advice! The machine loading system has to be long to avoid the boom to fall down!

First open sections: look at the inclination, the central tower isn't vertical

#### First open sections

Raptor boom must be in this position before transporting either to next run or unwinding hose in field. *Remove the middle bar, take the elastic pin off, go to the section end, lift it up and fold it* 

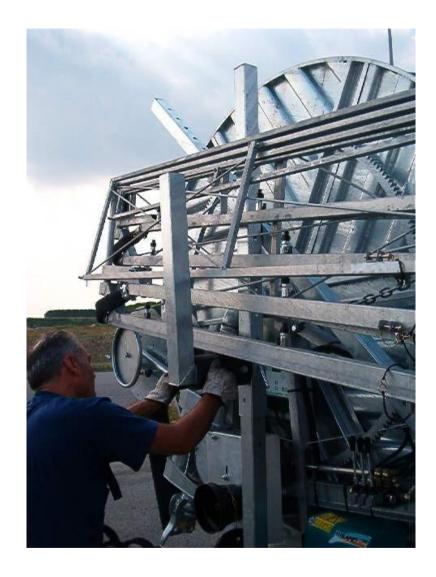

Folding the first section

# Push the folded wing onto the machine support

Left wing on its support

Turn the "L" pipe in the upper position and fix it

Support on the machine

#### Some particulars of the Raptor series:

Central nozzles or small sprinkler in the cart position. Option of either

Adjustment holes and pin to stop rotation

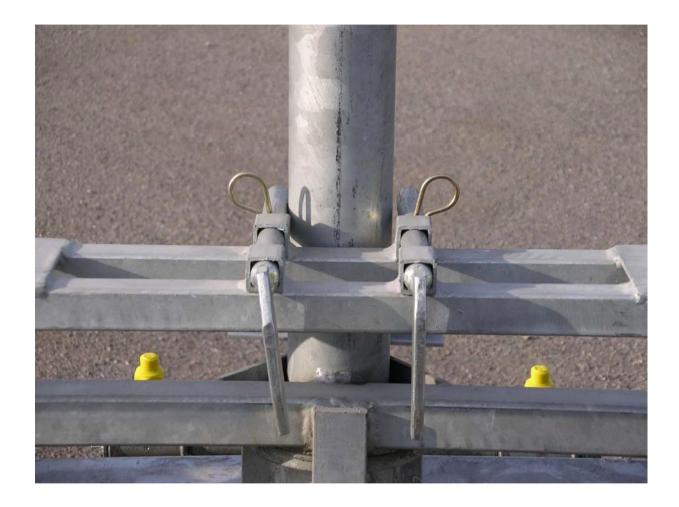

Ball valve and nozzle Nozzle sizes to suit any application

-Green -Yellow -Red -Black

Section joint

Pins to stop the levelling system during the transport Remove pins when watering to allow self levelling

#### Support arm on the machine

Quick and easy cart connection

Optional fifth wheel system reduces damage to crop

#### **IMPORTANT**

Boom Wings **must** be folded **back to position one before** transporting i.e. Hose unwinding and irrigator shift

*Ensure self levelling pins are located in the central position* **before** *Transporting i.e. Hose unwinding and irrigator shift* 

Failure to comply with the above will result in damage to the unit And may void warranty.
